

# EXPERT COLLABORATION ON THE FLY

Augmented Reality Smart Glasses by Moverio

When engineers and specialists do field maintenance on critical machinery, they're usually hands on, on site. But there are often times when they may need extra support to be more efficient and solve problems on the fly to increase productivity and equipment uptime, save multiple trips to sites and improve customer satisfaction.

## What if specialists could partner with generalists

who do the hands-on work?

Uptime often requires a collaborative effort to keep critical equipment and heavy machinery running. When field service personnel wear smart glasses, their hands are free for work. With these see-through AR glasses, they can then keep an eye on the equipment while receiving real-time guidance from experts.

Using Moverio smart glasses, on-site operators can prevent costly downtime.

AR-powered "see what I see" capabilities help field service personnel get on-demand guidance from experts.

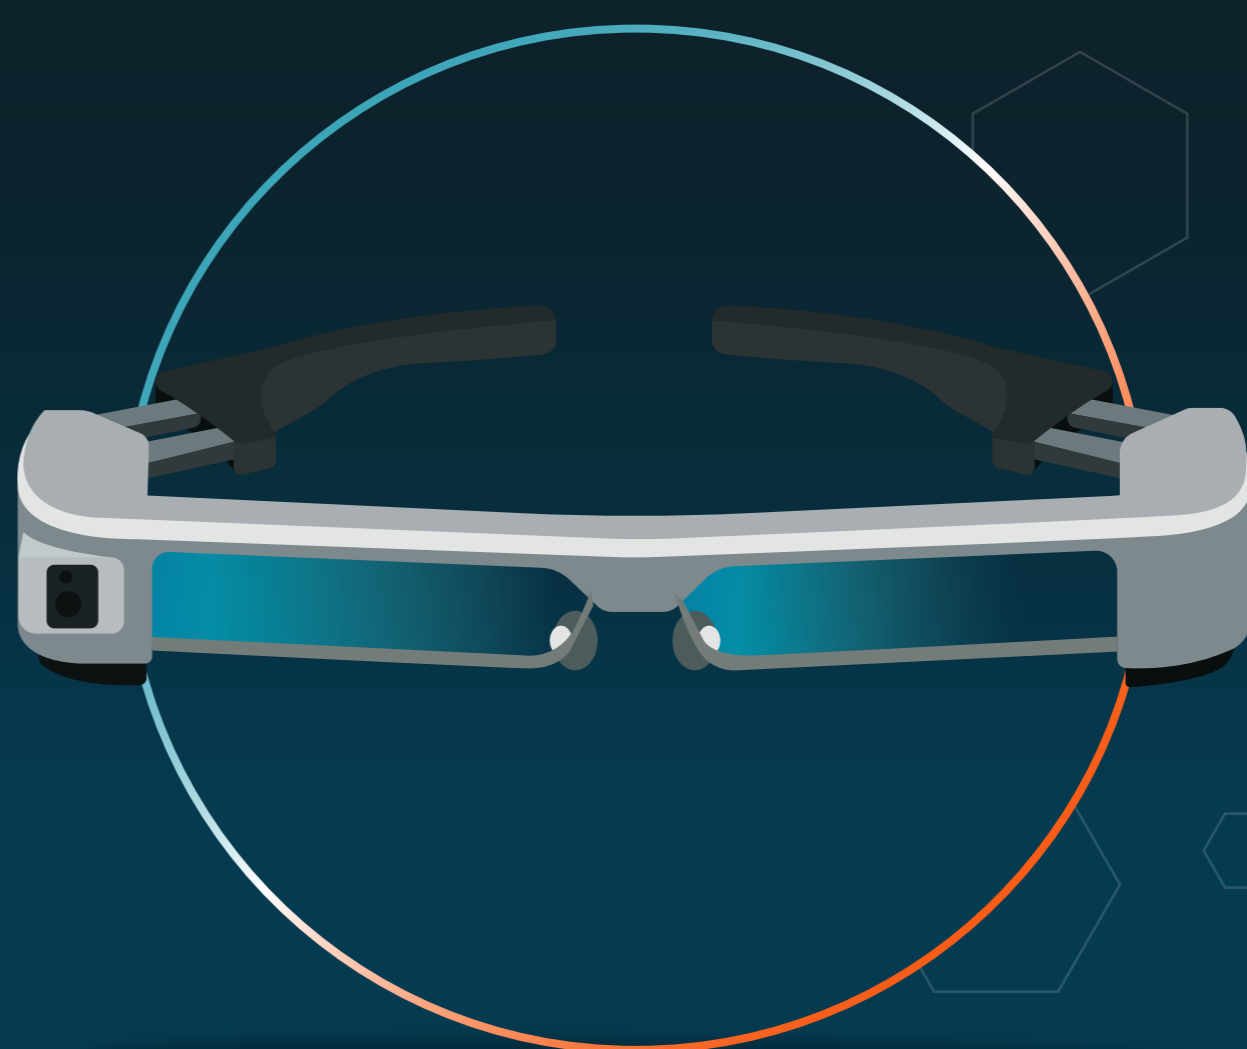

And with Moverio smart glasses, field service teams can view digital content and get real-time help.

Moverio can help bridge the gap and improve uptime with productive expert collaboration.
